

RECOMMENDED FILES FROM POPULAR SOFTWARE PROGRAMS

AUTHOR'S NOTE: Some programs produce reports with acceptable margins. Others need to be adjusted as they are too narrow to clear the punched holes. Some programs allow you to adjust the margins from within the program, while others are fixed and require a third party program to make the necessary corrections. You **CANNOT** adjust margins from a pdf file using Adobe Acrobat (we tried). For help setting margins, see our article "How to Use SEJDA.com to Adjust Margins" – details below.

MARGIN STANDARDS:

- Double sided printing : .8" (2.0cm/20mm if metric) on both the left and right sides
- Single sided printing: .8" (2.0cm/20mm if metric) on both the left and .5" (1.3cm/13mm) on the right side

LOGTEN

To easily generate your entire package, use the link. You must be using a device on which has Logten has been installed: <https://logten.com/partner/prosoftreports/on>

OR

To create files individually:

- LOGBOOK – REPORTS/USA REPORTS – Jeppesen 27 pro pilot (NOT the trip Log) L/R (**margins are good – no need to adjust**)
- EXPERIENCE TAB: Flight Experience detailed (**check margins - depending on which device you are using to generate file from, left margin may be too narrow; see specs above and our article entitled "How to use SEJDA to correct margins"**)
- GRAPHS TAB: (5) time by... class, year, type, engine type, time type (**check margins - depending on which device you are using to generate file from, left margin may be too narrow; see specs above and our article entitled "How to use SEJDA to correct margins"**)

FOREFLIGHT

- Complete 2-Page Report (their margins are too narrow and are not adjustable from within program; **see article entitled "How to use SEJDA to correct margins"**)
- Flight Experience summary (**same; margins are too narrow and need adjusting**)

MILKEEP

- Comparative Two-Page SPLIT report (**no need to adjust margins**)
- Career Flight Experience (margins are too narrow and need adjusting - **see article entitled "How to use SEJDA to correct margins"**)

LOGBOOK PRO

- Split Report; Left/Right Segmented (Commander Full Size) **(no need to adjust margins)**
- Aircraft Stats **(no need to adjust margins)**
- Aircraft Configuration Time Summary **(no need to adjust margins)**
- Logbook Totals Report **(no need to adjust margins)**

SAFELOG

- Jeppesen Inspired Universal FCL (margins are adjustable from within program; see specs above)
- Flight Experience Report: **(check margins; adjust in program if possible; otherwise see article entitled “How to use SEJDA to correct margins”)**

MYFLIGHTBOOK

- Use USA (Facing Pages) layout **(check margins; adjust in program if possible; otherwise see article entitled “How to use SEJDA to correct margins”)**
- NOTE: A Flight Summary is automatically generated at end of file.

CREW LOUNGE

This program is very challenging. Settings and margins both will need work. Contact us for further assistance. Some basic settings:

- Use either Jeppesen inspired or the P092 FAR format.
- Turn OFF Pattern Cutting Corners
- Turn OFF gray or green background color
- Turn ON page numbering, with “page numbers ONLY”
- For assistance with margins, you may need our help.
